

Product Guide**A 1707A** 50 Event, 4 Output, 24 Hour, 7 Day Timer

A 1707A 50 Event, 4 Output, 24 Hour, 7 Day Timer

**Overview**

The A 1707A is a versatile timer which has four switched outputs at 24V and four closing contacts which activate simultaneously. The unit has a total of 50 station or cycle times. Each of these stations can be set to turn on any day of the week or multiples of days (e.g. Monday-Friday) for up to 24 hours. Multiple day entries account for only one station. E.g. Each of the 50 stations could be set to turn on Monday-Sunday giving the user access to 50 different turn on times each day.

Each of the 50 stations can be set to any of the 4 outputs. Note: a station cannot be set to turn on more than one output simultaneously.

Each of the outputs can also be selected manually to be either "on" or "off".

There are also a number of DIP switches on the rear of the unit for battery backup and various security lockout features (see below).

DIP Switch Options**DIP 1 – Battery Backup Function**

With this DIP switch "on" the clock will be backed up in the event of a power failure. Note that the display is not backed up, only the clock chip itself. The switched outputs will also turn off in the event of a power failure.

DIP 2 – Station Edit Lockout

With this DIP switch "on" the unit will not access the station edit mode. Therefore no changes can be made to station times.

DIP 3 – Edit Time Lockout

With this DIP switch "on" the unit will not access the time edit mode. Therefore no changes can be made to the current time.

DIP 4 – Clear Memory Lockout

With this DIP switch "on" the memory cannot be erased.

Key Features

- ✓ Australian made
- ✓ 10 year manufacturer warranty with local product support
- ✓ Powered by 24V DC
- ✓ 50 event times
- ✓ 4 outputs
- ✓ Manual override
- ✓ LCD readout
- ✓ Switching time between 1 second and 24 hours
- ✓ Stylish 1RU half rack case
