INSTALLATION MANUAL

MODEL CAT01 TV OVER CAT5 DISTRIBUTION AMPLIFIER

The CAT01 is a high output distribution amplifier specially designed to distribute TV signal over CAT5/6 cable. The amplifier has four separate RJ45 outputs each with an individual gain control. The amplifier also has an overall gain and tilt control.

INSTALLATION

Connect the RF signal to the RF input of the amplifier.

Note: If the input signal is too low it may be necessary to install a pre-amplifier (MDA20H and KPS06 power supply).

Connect the DC power supply to the DC input socket.

Make an overall loss calculation for each of the CAT5 cables to be connected, the loss per 10 metres is approximately 6 dB (CAT6 @ 700 MHz). Adjust the respective output gain controls to compensate for losses in the cable.

Connect CAT5/6 patch cables to the outputs of the CAT01.

Note: Ensure to leave the terminators in place on any ports that are not to be used.

Adjust the overall gain and tilt controls to the required output.

Connect your television to the RJ45 wall socket which has been fed RF signal via the CAT01 using a KLE02 Balun transformer cable. Repeat for all televisions you wish to connect to the CAT01.

Once all televisions are connected fine adjust the output gain controls if required for optimum performance.
