

Jellyfish® IP67 ABS Equipment Cases

The Ultimate Water & Dust Proof Protection For Your Equipment.

IP67 rated for the ultimate in dust & water protection.

Ideal for storing environmentally sensitive devices such as test equipment, cameras, computers and sensors. Each case employs a UV resistant rubber seal ensuring dirt & moisture stay outside.

Customisable foam inner.

Each case features two layers of pre-perforated high density foam inner which can be customised to suit each piece of equipment. This prevents unwanted movement in transit.

An 'eggshell' foam lid ensures a secure fit, minimising the chance of damage even when dropped or mishandled.

Lock hasps for added security.

Each latch is fitted with a moulded hasp for the addition of padlocks, increasing security during transit.

Snap fit latches are constructed from high density plastic and stay latched even when dropped.

Stainless steel hinge, latch & handle pins.

For added strength and rust free performance all pins in each case are constructed from stainless steel.

Pressure release valve

An inbuilt release valve on the front allows internal pressure to be equalised with ambient external pressure. This ensures a reliable seal at all times.

The Jellyfish® Suitcase.

The T 5066 is fitted with luggage type wheels and retractable trolley handle for easy transportation. Ideal for easy transportation with heavier equipment.

2 Layers Perforated Foam

Easily Customisable

Lock Hasps for security
