4K Wireless HDMI Video Sender System With KVM

Control a PC or laptop using USB peripherals at the receiver end.

This 4K wireless HDMI extender system supports 4K 60Hz resolutions with super smooth playback and low latency. Allows wireless sending of HD video signals from a HDMI source (for example, your set-top box) to a second TV or projector in another room and continue to operate those remotely. A USB KVM function also allows connection and control of a laptop from the remote location. Allows for wireless streaming content from one transmitter to multiple receivers simultaneously. Size: 154 x 77.5 x 21mm.

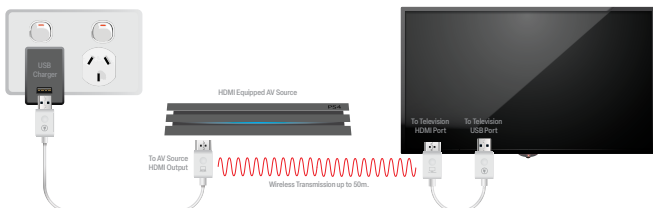

- Features** • Supports 4K @ 60Hz • As low as 100ms latency • Supports 20-60KHz IR remote extension • Supports USB KVM function • Up to 150m transmission line of sight • Auto channel selection • Equipped with 802.11ac 2T2R WiFi MIMO module • High-security protection • Supports one transmitter to multiple receivers • Supports HDCP2.2

Wireless HDMI Extender

These wireless extension cables provide a simple way to send 1080p 60Hz signals from a HDMI source device to TV or monitor in another room up to 50m away (line-of-sight). All you need is USB power at each end, plug one HDMI into the source, and the other into your TV/monitor. The cables automatically pair and send audio and video over a paired 5GHz Wi-Fi signal. Offers 80-100ms latency performance making suitable for gaming consoles and PCs. Requires USB 2A power supply (not included).

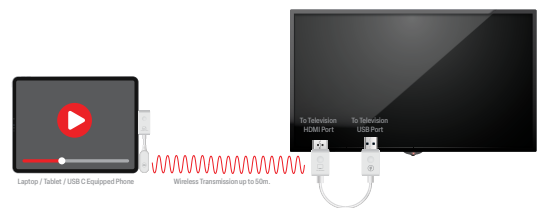

- Features** • 1080p @ 60Hz wireless video and audio • Casts a HDMI source device to a monitor or television up to 50m away • Operates on 5GHz 802.11ac band • HDMI 1.4 compliant • HDCP compliant • Fully automatic pairing for near instant signal connection • No drivers, software, manual casting or set up needed.
