Redback® 8 Way MP3 Message Player With Alert/Evac

A 1741A

10 year warranty
10 year
2004-01

A 1720B

Designed to allow custom programming, tones, messages or music for use in interactive displays, security, customer entry and emergency evacuation announcements. When combined with a Redback A 1708 timer it can play announcements at prescribed times for in-store advertising and customer notification.

It allows playback of custom MP3 tracks plus standard alert and evacuation tones. A library of commonly used tones, messages and phrases are provided on a Secure Digital (SD) memory card. Custom MP3 tones, music etc may be added as desired. The SD card is preloaded with standard tones, including bell, bing bong, siren and pre-announcement chime, plus Australian Standard alert and evacuation tones (complying to AS1670.4). To comply with Australian Standards for evacuation tones, a custom message may be played after every fourth cycle providing evacuation instructions to occupants. Alert tones can be automatically switched to evacuation tones after a set period (adjustable between 30 and 240 seconds).

Playback for each track can be activated by a closing set of contacts. Contacts may be configured between alternate or momentary action. This can include or exclude alert & evacuation tones as desired. Cancel contacts are provided to stop playback of tracks. Playback can also be manually triggered by front panel switches (if activated via the DIP settings on the rear panel). 9-24V DC switched output which is activated when any message is active (the switched output is dependent on the input voltage).

Features • Allow for up to 8 custom tracks • Inbuilt tone & phrase library • 9-24V @ 300mA DC operation (plugpack included with A 1741A) • SD card included • Terminations via screw terminals • Tones conform to Australian standard • Provision for voice over in evac mode • Stylish 1RU chassis • A 1720A PCB size 120 x 70mm

24V DC Horn Speaker With MP3 Player

Designed in Australia by Redback, this horn speaker features an internal amplifier and MP3 player which plays messages when a 24V input signal is applied. This horn has a multitude of uses including general announcements, evacuation notices and door-bells. It could even be used to play warning signals for industrial equipment to alert staff. The tone will play as long as 24V DC is applied. Tones can be selected via a rotary switch on the back of the horn. SD card may be loaded from a slot in the side of the horn case. Offers the same audio performance as the popular C 2053 horn speaker. Size: ≈1800 x 255D

Features • In-built MP3 player • Rotary switch tone selection • SD card slot • Adjustable output volume level • Ideal for playing warnings, tones and messages • Tone plays when 24V DC power is applied • Superb speech reproduction • Excellent frequency response

USB MP3 Audio Player For BGM Systems

Designed for BGM systems in commercial installations requiring looping audio playback from a USB memory stick. Simply connects to an amplifier RCA input and provides typical CD player style functionality ie: play/pause & track skip. Includes adjustable line level output. Suitable for use with USB memory sticks or SD/SDHC/CF cards when used in conjunction with a card reader. Requires 12V DC plugpack (M 9272B). Dimensions: 100L x 40H x 55Wmm.

Features • Supports MP3 folder hierarchy structure ie: will browse music inside folders on stick • Compact size • Line level volume adjustment • Simple plug and play operation • Box flange allows mounting to any surface • Continuous loop playback

Redback® SD Card Music On Hold Player10 year warranty
10 year
2004-01

Connects to your telephone on hold music input to provide timed messages and background music for your customers on hold. The included 8GB SD card can be loaded with your choice of background music and custom hold messages or promotions. Message intervals can be adjusted between 30 seconds and 7.5 minutes.

In addition to hold music, it can also be used to play promotional messages over a store PA system.

A standard stereo RCA line output is provided for easy connection to any existing PA or telephone system. Playback commences automatically when switched on and files play in the order in which they are named in the 'music' or 'messages' folders (ie alphanumeric).

Features • SD card input for custom track storage • 12-30V @ 300mA DC operation (plugpack included) • Includes 8GB SD card • Adjustable message interval timing (30s to 450s) • Ideal for in store background music promotion
