

Please connect the battery first, and then connect the solar panel after setting the system parameters. If you do not operate in order, the battery will be damaged

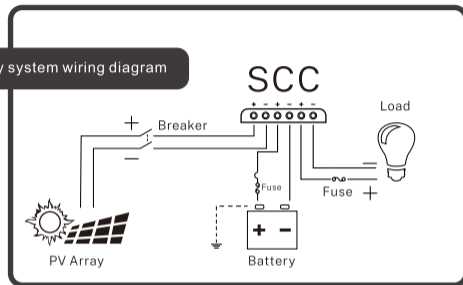

## CATALOGUE

|                        |        |   |
|------------------------|--------|---|
| Focus                  | 1P-2P  | ※ |
| Product instructions   | 3P-12P |   |
| System voltage setting | P7     | ※ |
| Battery type setting   | P8     | ※ |
| Load working modes     | P9     |   |

When using lithium batteries, please set the system voltage first, and then set the corresponding battery type (see P7-3.5/P8-3.6).

# 1.Wiring Instruction

Solar energy system wiring diagram

※ Perform the following steps to connect cables and install them ※

Step 1  
Connect  
batteries

Step 2  
Connect  
the load

Step 3  
Connect the  
solar panels

## 2.Notice

### NOTICE:

This product is a commonly used positive electrode controller, the positive electrode of the photovoltaic array, battery and load can be grounded at the same time.(In special circumstances, the negative pole of the battery can also be grounded, but in this case the negative pole of the photovoltaic terminal and the negative pole of the load terminal cannot be grounded.)

### NOTICE:

If the inverter or other starting current is loaded in the system, please connect the inverter directly to the battery. Do not connect with the controller's load terminal

### NOTICE:

If a lithium battery is used, set the system voltage and then the battery type before use. (See P7-3.5 / P8-3.6)

## 3.2 Icon meaning

| Icon  | Meaning                 | Icon  | Meaning                     | Icon       | Meaning                             |
|---|-------------------------|---|-----------------------------|------------|-------------------------------------|
|  | Day                     |  | Data Relates to Charging    | <b>FLT</b> | Float Charging                      |
|  | Night                   |  | Data Relates to Discharging | <b>ABS</b> | Absorption Charging                 |
|  | Charging                |  | Data Relates to Temperature | <b>EQU</b> | Equalization voltage                |
|  | No Charging             |  | Data Adjustable             | <b>SCI</b> | Lithium terminates charging current |
|  | Load On                 |  | Data not Adjustable         | <b>RCV</b> | Recovery Charging Voltage           |
|  | Load Off                |  | Sealed Battery              | <b>SCV</b> | Constant Charging Voltage           |
|  | System Works Normally   |  | GEL Battery                 | <b>LVD</b> | Low Voltage Disconnection Voltage   |
|  | System Works Abnormally |  | Flooded Battery             | <b>LVR</b> | Low Voltage Re-connection Voltage   |

### 3.3 Button definition

| Button meaning | Button symbol | Button function   |
|----------------|---------------|---|
| <b>MENU</b>    | <b>+</b>      | Long press to enter or save settings, short press to turn the page or increment the value.  |
| <b>SET</b>     | <b>—</b>      | Short press to turn the page or decrement the data ;<br>Tap on the home screen to enable or disable the load;<br>Long press in the setting state to exit without saving;<br>On the temperature screen, hold down to restore the default parameter values of the current battery type. |

### 3.4 Main loop pages

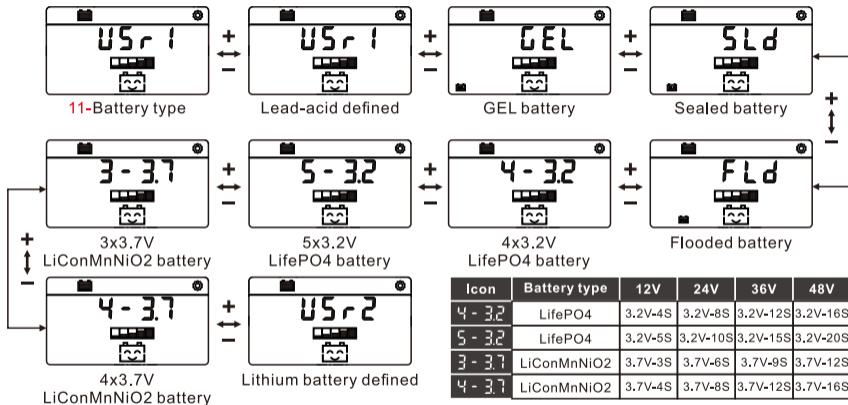

### 3.5 System voltage setting

Press “+” on the home screen to switch to the screen (10), hold down the “+” key to enter settings, select the corresponding battery voltage, and hold down the + key to save the settings.

### 3.6 Battery type setting

Press + on the home screen to switch to the screen (11), hold down "+" to enter settings, select the corresponding battery type, and hold down "+" to save the settings.

## 4. Load working modes

| Icon    | Instructions  | Icon | Instructions   |
|---------|---|------|--|
| 100     | Reverse light control (load does not work at night, work during the day)  | 117  | 24-hours work  |
| 116     | Light control mode (Load works after dark)  | 200  | The second section of the working time setting light control plus dual time mode |
| 101-115 | Light control plus dual time mode: The first working period of the load after dark. 101 indicates 1 hour, and 115 indicates 15 hours. |      |  |
| 201-215 | Light control plus dual time mode: The second working period of the load before dawn. 201 means 1 hour 215 means 15 hours.            |      |  |

## 5.Fault code

| Error Code | Cause                  | Solution   |
|------------|------------------------|--|
| <b>Ex1</b> | Battery undervoltage   | Undervoltage protection, load off Battery overvoltage  |
| <b>Ex2</b> | Battery overvoltage    | Overvoltage protection, load off, charging stop  |
| <b>Ex3</b> | Overload protection    | Check the load wiring, or reduce the load device   |
| <b>Ex5</b> | Overheating protection | Controller internal overheat protection, charging stopped, automatic recovery after cooling  |
| <b>Ex6</b> | Overcurrent protection | Charging overcurrent protection, rated current +2A, 60 second protection; 1.25 times, 5-second protection; Automatic recovery in 2 minutes |

10

"E" stands for "Error";

"X" indicates the number of errors. If there are multiple errors, press "+" or "-" to check the loop.

"1-6" indicates the code name.

## 6. Technical parameter

| <b>Max Current</b>          | <b>10A</b>              | <b>20A</b>             | <b>30A</b> | <b>40A</b>             | <b>50A</b> | <b>60A</b> | <b>80A</b> |
|-----------------------------|-------------------------|------------------------|------------|------------------------|------------|------------|------------|
| Rated discharge current     | 10A                     | 20A                    | 30A        | 30A                    | 30A        | 30A        | 40A        |
| Battery Voltage             | 12V/24V/48V Auto. (36V) |                        |            |                        |            |            |            |
| Max PV Open Circuit Voltage | 100V                    |                        |            |                        |            |            |            |
| Self-consumption            | ≤30mA                   |                        |            |                        |            |            |            |
| Loop Voltage Drop           | ≤0.3V                   |                        |            |                        |            |            |            |
| USB Output                  | 5V                      |                        |            |                        |            |            |            |
| Temperature Compensation    | -4mV/°C/2V (25°C)       |                        |            |                        |            |            |            |
| Operating Temperature       | -20°C~+50°C             |                        |            |                        |            |            |            |
| Protection Category         | IP30                    |                        |            |                        |            |            |            |
