

## **APP Downloading :**

1, IOS: Seach VR Panorama in APPstore, then download and install it.

2, Android : Search VR Panorama in Google Play, then download and install it.

## **Register Account :**

## Adding Device : Serial number Add / AP Mode / WIFI Smartconfig / AP local device

### 15:16 0.19 % @ 🕾 Sill 🕲 🔳 44 Choose type Serial number Add Such as the camera has on the network, it is recommended to use this way to add AP mode Such as camera support AP mode and open AP mode, distribution network can use this way to add WiFi smartconfig Such as camera support a key distribution network, the distribution network binding can use this way AP local device If the camera supports AP mode and has enabled AP mode, you can use this method to preview

#### Notes:

- 1、 **Serial Number Add:** Network of the device must be available, And P2P must be on line.
- 2、**AP Mode:** The device should support WIFI hotspot sharing, then connecting the hotspot by mobile phone, make sure the devices are connected, and their net work is available. Last you can add it on APP.
- 3、**Wifi Smartconfig:** This mode should be used with customer device ONLY. After the mobile phone connected with the WIFI of router, reset the device to factory default, staying armed state. The APP will send command to device. After the device getting command , it will connect with network automatically. Then you just need to add it to APP.

4、 **AP local device:** Mobile phone and device must be in LAN, you can do preview by this function.
