Custom Settings

The unit comes preset with the following default settings:

Time Delay	Preset to approximately 30 seconds lag	i.e. Time in which the LED strip will illuminate from a motion activation
Detecting Range	Preset to a maximum of 5 meters	i.e. The maximum distance in which the Sensor will pick up movement
Light Sensitivity	Preset to operate only in dark	i.e. The operational allowance of illumination to work only when it is dark

PLEASE NOTE: If you need to change any settings, you may do so at your own will. The settings controller board can be found at the back of the sensor.
